

GenConneX™ Honda EU3000is All-Terrain Wheel Kit Installation Instructions

**CAUTION: UNIT IS HEAVY AND CAN CAUSE INJURY
OR DAMAGE IF NOT PROPERLY SUPPORTED**

Step 1: Support unit on wooden blocks then remove both bottom rails with 12mm socket.

NOTE: This step may have been done at factory if you ordered wheel kit when ordering generator.

Step 2: Attach axles. Use bolts and nuts from step 1, or bolts and nuts supplied with generator if wheel kit ordered with generator.

Step 3: Slide on wheels with protruding hub of each wheel facing toward unit (so wheels don't rub against generator).

Step 4: Install cap nut on each axle end by tapping in place with 3/4" socket and small hammer.
