Propane & Natural Gas (Bi-Fuel) kit for your Honda EU7000is Inverter Generator. Includes a 6’ propane regulator & hose for connecting to a standard 20-100lb BBQ tank.

Got Propane or Natural Gas?
No more gasoline!
Propane lasts forever & run days not hours!

Keep it simple
✓ Heat
✓ Well Pump
✓ Sump pump
✓ Fridge & Freezer
✓ Microwave
✓ Lights
✓ TV & Internet
✓ RV Power

Problem Solved.
Propane & Natural Gas (Bi-Fuel) kit for your Honda EU7000is Inverter Generator. Includes a 6’ propane regulator & hose for connecting to a standard 20-100lb BBQ tank.

Everything fits safely inside!
Power for days not hours!

Minimum single 60lb or dual 30lb propane tanks for operation at >45deg F. Tank size must be increased or doubled up for lower operating temperatures and/or continuous max loads. Approximate 3 days run time for typical home load in ECO mode on single 100lb tank.

Engineered to the next level.
GenConneX™ Honda EU7000is Propane & Natural Gas Conversion Kit

Model: GXK LPNG-Kit-EU7000is-EC

Comes with 6' regulator/hose for 20-60lb BBQ tank
(high altitude orifice kits available up to 10,000ft)

Propane Natural Gas Load
2.40 lbs/hr 50,000 BTU/hr at 2800 Watts
1.57 lbs/hr 36,300 BTU/hr at 1400 Watts
1.17 lbs/hr 29,600 BTU/hr at 700 Watts

NO ADJUSTMENTS - Just install and run!
7000 Watts Peak, 5500 Watts >1/2hr (on propane)
6000 Watts Peak, 5500 Watts >1/2hr (on Nat. Gas)

What's in this kit?
Pre-tested propane demand regulator module (no adjustment necessary), patent pending fuel-injection adapter with pre-tuned propane and natural gas orifice inserts, internal grounding strap, vent hoses, gasoline feed & drain caps, labels, 6' quick-disconnect propane tank hose w/dust plugs and full color assembly instructions.

ECO mode still works!

EVERYTHING FITS SAFELY INSIDE!

We engineer our gas systems pre-set for optimum operation with everything safely shock mounted inside. Ice, snow and dirt can shut external drilled-on kits down while we keep running.

What sets us apart? All GenConneX™ products are made exclusively with custom stainless steel and aluminum structural components, use all stainless steel locking fasteners for vibration resistance, and all gas line components are brass to resist corrosion and fatigue (as seen often with plastic fittings). In addition, only existing mounting features are used, and all units are 3rd party tested for emissions compliance by an EPA and CARB listed testing laboratory.

APC 10 Circuit 240Vac Smart-Home Transfer Switch

FEATURES
10-circuit auto load-shed home transfer switch
(mount next to your main electrical panel)
120/240Vac, 30Amp watertight house inlet kit
(Hubbell shipboard series L14-30 locking inlet)
30A/240Vac UL 1008 listed transfer switch
(conforms to NEC 702.11(B))
Auto load-shedding is fully programmable
(each circuit can be individually controlled)
Programmable for UPS backup
(Battery back up of critical loads)
Designed by APC for Honda Power
23.5"H x 15.5"W x 3.31"D x 28lbs

BENEFITS
You don’t have to head to the basement in the dark - the transfer switch automatically powers your selected circuits after your generator starts!
You don’t have to be home - a neighbor or family member can simply plug it in and turn it on with no home entry needed.
More loads from a single generator with automatic load shedding! Just program each load for max acceptable off time and minimum acceptable on time and it will turn off loads to make room for larger loads like intermittent microwave use and well pump motors starting.
UPS Backup - Just plug in a battery based UPS into the front UPS inlet and select which circuits you want powered while you plug in your generator.

Pre-wired for easy electrician installation - all extra parts included to keep install costs down!
(you supply wire from outdoor plug to panel, and 30Amp circuit breaker for your particular main panel - everything else included)
