Tri-Fuel HONDA EG2800i
Conversion by Genconnex™

Gasoline, Propane and Natural gas Inverter Generator

Propane lasts forever & run days not hours!

Keep it simple
- Heat
- Sump pump
- Fridge & Freezer
- Microwave
- Hall lights
- TV & Internet

Problem Solved.
Generator ships with choice of hose such as 6 foot propane ACME type regulator/hose. Propane tank sold separately.

So Many Fuel Choices!
We combined Honda's stunning quality and light weight with the ability to operate now on three fuels gasoline, propane and natural gas. The ultimate survival tool!

VERSIONS AVAILABLE

‘Standard’ Model
- 2-20Amp & 1 30Amp L5-30
- GXG GLPNG-EG2800i-SE-EC

‘Contractor’ Model:
- 4-20 GFCI outlets
- GXG GLPNG-EB2800i-SE-EC

Please see website for more details & current pricing

Engineered to the next level.
Propane Genconnex™ Honda 120Vac EG2800i Inverter Generator

Propane, Natural Gas and Gasoline Ready
Comes with many hose options including 6’ regulator/hose for 20-60lb BBQ tank (high altitude orifice kits available up to 9,000ft)

Propane
Load
1.60 lbs/hr at 1600 Watts
0.92 lbs/hr at 800 Watts
0.70 lbs/hr at 400 Watts

2800 Watts Peak (gas & propane)
2500 Watts continuous rated > 30 minutes
2400 Watts Peak (natural gas)
2400 Watts continuous rated > 30 minutes

Inverter Output 120Vac
More efficient & electronics safe
Low noise
At 62dBa @1/4 load, sleeping won’t be a problem

Approx. 68 pounds
Hand Carryable with easy-to-grab frame

Dimensions
16.9” x 17.6” x 18.9” (L x W x H)

What sets us apart? All Genconnex™ products are made exclusively with custom stainless steel and aluminum structural components, use all stainless steel locking fasteners for vibration resistance, and all gas line components are brass to resist corrosion and fatigue (as seen often with plastic fittings). In addition, only existing mounting features are used, and all units are 3rd party tested for emissions compliance and EPA certification.

APC 6 Circuit 120Vac Smart-Home Transfer Switch

**FEATURES**
- 6-circuit auto load-shed home transfer switch (mount next to your main electrical panel)
- 120Vac, 20Amp watertight house inlet kit (Hubbell shipboard series L5-20 locking inlet)
- 30A/120Vac UL 1008 listed transfer switch (conforms to NEC 702.11(B))
- Auto load-shedding is fully programmable (each circuit can be individually controlled)
- Programmable for UPS backup (battery back up of critical loads)
- Designed by APC for Honda Power

**DIMENSIONS**
20”H x 16”W x 4”D

**BENEFITS**
- You don’t have to head to the basement in the dark - the transfer switch automatically powers your selected circuits after your generator starts!
- You don’t have to be home - a neighbor or family member can simply plug it in and turn it on with no home entry needed.
- More loads from a single 120Vac generator with automatic load shedding! Just program each load for max acceptable off time and minimum acceptable on time and it will turn off loads to make room for larger loads like intermittent microwave use and fan or pump motors starting.
- UPS Backup - Just plug in a battery based UPS into the front UPS inlet and select which circuits you want powered while you plug in your generator.

Pre-wired for easy electrician installation - all extra parts included to keep install costs down!
(you supply wire from outdoor plug to panel, and 30Amp circuit breaker for your particular main panel - everything else included)
