PropANE / NATURAL GAS Kit for HONDA EU2200i

By Genconnex®

Got Propane or Natural Gas?
No more gasoline!
Propane lasts forever & run days not hours!

Keep it Simple
- Heat
- Sump pump
- Fridge & Freezer
- Microwave
- Hall lights
- TV & Internet
- RV Power

Problem Solved.
Propane & Natural Gas (Bi-Fuel) kit for your Honda EU2200i Inverter Generator. Includes a 6' propane regulator & hose for connecting to a standard 20-100lb BBQ tank. Other hoses are available. See website for details!

Everything fits safely inside!

No drilling or cutting - 100% reversible
(propane tank and generator not included)

Power for days not hours!
Minimum single 20lbs propane tank for operation at >25deg F. Tank size must be increased for lower operating temperatures at continuous max loads. Approximate 20hrs run time for typical home load in ECO mode on single 20lb tank.

Engineered to the next level.
EVERYTHING FITS SAFELY INSIDE!

We engineer our gas systems pre-set for optimum operation with everything safely shock mounted inside. Ice, snow and dirt can shut external drilled-on kits down while we keep running.

What sets us apart? All Genconnex® products are made exclusively with custom stainless steel and aluminum structural components, use all stainless steel locking fasteners for vibration resistance, and all gas line components are brass to resist corrosion and fatigue (as seen often with plastic fittings). No cutting or drilling required. This kit is EPA certified for installation and use in the Honda EU2000i generator in all 50 States.

APC 6 Circuit 120Vac Smart-Home Transfer Switch

FEATURES
- 6-circuit auto load-shed home transfer switch
  (mount next to your main electrical panel)
- 120Vac, 30Amp watertight house inlet kit
  (Hubbell shipboard series L5-30 locking inlet)
- 30A/120Vac UL 1008 listed transfer switch
  (conforms to NEC 702.11(B))
- Auto load-shedding is fully programmable
  (each circuit can be individually controlled)
- Programmable for UPS backup
  (battery back up critical loads)
- Designed by APC for Honda Power
- 20”H x 16”W x 4”D

BENEFITS
- You don’t have to head to the basement in the dark - the transfer switch automatically powers your selected circuits after your generator starts!
- You don’t have to be home - a neighbor or family member can simply plug it in and turn it on with no home entry needed.
- More loads from a single 120Vac generator with automatic load shedding! Just program each load for max acceptable off time and minimum acceptable on time and it will turn off loads to make room for larger loads like intermittent microwave use and fan or pump motors starting.
- UPS Backup - Just plug in a battery based UPS into the front UPS inlet and select which circuits you want powered while you plug in your generator.

Generator & propane tank not included
