

Engineered, Tested & EPA Certified

Honda EU7000is Bi-Fuel Generator

Propane & Nat. gas EFI by Genconnex

Stunningly quiet. 52dBa @ 1/4 load

(Unlike typical Generator = 72dba @ 21ft. which is roughly equivalent to a Diesel Freight Train running at approx 25mph.)

Propane & Natural Gas

Features:

- Inverter output
- Whisper-quiet 52dBa @ 1/4 load
- Two fuel input Propane & Natural Gas
- EFI engine control
 Computer controlled
 air/fuel correction maximizes
 fuel performance and
 auto adjusts for altitude
 - Load starting
 Able to cold-start up to 75% of full load with all three fuels
 - Key start remote start capable

One switch changes fuel selection!

Switch Position

I 5,800W Natural GasII 7,000W Propane

Keep it simple

- ✓ Heat
- Well pump
- ✓ Fridge & Freezer
- Microwave
- Hall lights
- ✓ TV & Internet

3 Year Warranty By Genconnex[®] see website for details

Engineered, Tested & EPA Certified

Bi-Fuel EFI Controlled Modified Honda EU7000is Inverter Generator

Electric Start

HOW QUIET?

Propane & Natural Gas Ready

 Propane
 Natural Gas
 Load

 4.00 lbs/hr
 84,000 BTU/hr
 at 5500 Watts

 2.22 lbs/hr
 46,000 BTU/hr
 at 2750 Watts

 1.58 lbs/hr
 32,700 BTU/hr
 at 1375 Watts

7,000 Watts Propane Peak Power 5,800 Watts Natural Gas Peak Power 5,500 Watts continuous rating >30 minutes (all)

Inverter Output 240Vac and 120Vac Extremely fuel efficient & electronics safe

Ultra Sound Absorbing Enclosure At 52dBa @1/4 load, 60 dBa @ rated load

Remote Start/Stop ready or Bluetooth Genconnex 100', and 150' wired remote available

EFI Computer Control

Genconnex micro-controlled electronic fuel induction for precise fuel control of propane and natural gas

Parallel Ready

Two EU7000is can be paralleled together

Honda EU7000is - 52 dBa which is equivalent to a quiet conversation Most other brands - 72 dBa which is equivalent to a freight train passing by you at 35mph

What sets us apart? All Genconnex products are made exclusively with custom stainless steel and aluminum structural components, use all stainless steel locking fasteners for vibration resistance, and all gas line components are brass and stainless steel to resist corrosion and fatigue (as seen often with plastic fittings). All of our generators are 3rd party tested for emissions compliance and approved for use in all 50 states by the EPA.

OPTIONAL APC 10 Circuit 240Vac Smart-Home Transfer Switch

FEATURES

10-circuit auto load-shed home transfer switch (mount next to your main electrical panel)

120/240Vac, 30Amp watertight house inlet kit (Hubbell shipboard series L14-30 locking inlet)

30A/240Vac UL 1008 listed transfer switch (conforms to NEC 702.11(B))

Auto load-shedding is fully programmable (each circuit can be individually controlled)

Programmable for UPS backup (battery back up of critical loads)

Designed by APC for Honda Power

23.5"H x 15.5"W x 3.31"D x 28lbs

BENEFITS

You don't have to head to the basement in the dark - the transfer switch automatically powers your selected circuits after your generator starts!

You don't have to be home - a neighbor or family member can simply plug it in and turn it on with no home entry needed.

More loads from a single generator with automatic load shedding! Just program each load for max acceptable off time and minimum acceptable on time and it will turn off loads to make room for larger loads like intermittent microwave use and well pump motors starting.

UPS Backup - Just plug in a battery based UPS into the front UPS inlet and select which circuits you want powered while you plug in your generator.

Pre-wired for easy electrician installation - all extra parts included to keep install costs down!

(you supply wire from outdoor plug to panel, and 30Amp circuit breaker for your particular main panel - everything else included, indoor only)

OPTIONAL ACCESSORIES

100' & 150' Wired remotes

L14-30 to 50A Trailer Adapter

Adapter

HONDA

Parallel Kit

6' SS braided extension hose

Water resistant cover
