Propane HONDA EU2200i
Conversion by Genconnex®

Propane Inverter Generator
No more gasoline!
Propane lasts forever & run days not hours!

Keep it simple
✓ Heat
✓ Sump pump
✓ Fridge & Freezer
✓ Microwave
✓ Hall lights
✓ TV & Internet

Problem Solved.
Generator ships with 6 foot propane ACME type regulator/hose. Propane tank sold separately.

Stunningly quiet.
Typical Generator = 72dba @ 21ft, which is roughly equivalent to a Diesel Freight Train running at approx 25mph.

48dBa @ 1/4 load

**2200 Watts Peak**
1800 Watts continuous rated > 30 minutes

**Inverter Output 120Vac**
More efficient & electronics safe

**Ultra Sound-Absorbing Enclosure**
At 48dBa @1/4 load, sleeping won’t be a problem

**Approx. 48 pounds**
Hand Carryable by almost anyone

**12Vdc 96Watt outlet**
(not companion)
Can charge batteries or connect to tank heater

**Parallel Ready**
Comes with parallel output connectors

‘Stunningly’ quiet!
48 dBa (Honda EU2000i) is equivalent to a quiet conversation
72 dBa (Most other brands) is equivalent to a freight train passing by you at 35mph

What sets us apart? All Genconnex® products are made exclusively with custom stainless steel and aluminum structural components, use all stainless steel locking fasteners for vibration resistance, and all gas line components are brass to resist corrosion and fatigue (as seen often with plastic fittings). In addition, only existing mounting features are used, and all units are 3rd party tested for emissions compliance and EPA certification.

**APC 6 Circuit 120Vac Smart-Home Transfer Switch**

**FEATURES**
- 6-circuit auto load-shed home transfer switch (mount next to your main electrical panel)
- 120Vac, 20Amp watertight house inlet kit (Hubbell shipboard series L5-20 locking inlet)
- 30A/120Vac UL 1008 listed transfer switch (conforms to NEC 702.11(B))
- Auto load-shedding is fully programmable (each circuit can be individually controlled)
- Programmable for UPS backup (battery back up of critical loads)
- Designed by APC for Honda Power
- 20”H x 16”W x 4”D

**BENEFITS**
- You don’t have to head to the basement in the dark - the transfer switch automatically powers your selected circuits after your generator starts!
- You don’t have to be home - a neighbor or family member can simply plug it in and turn it on with no home entry needed.
- More loads from a single 120Vac generator with automatic load shedding! Just program each load for max acceptable off time and minimum acceptable on time and it will turn off loads to make room for larger loads like intermittent microwave use and fan or pump motors starting.
- UPS Backup - Just plug in a battery based UPS into the front UPS inlet and select which circuits you want powered while you plug in your generator.

Pre-wired for easy electrician installation - all extra parts included to keep install costs down!
(you supply wire from outdoor plug to panel, and 30Amp circuit breaker for your particular main panel - everything else included)
